

**I. Amendments to the Specification**

Enclosed is a substitute specification in clean form without markings and with the markings as to amended material. The substitute specification contains the application as originally filed, as well as amendments incorporated therein. It is respectfully requested that the substitute specification be used for examination purposes of the subject application. No new matter is presented as prohibited under 35 U.S.C. 132 in that the amendments made are clearly supported in the previous non-provisional, as well as provisional applications filed. An appropriate declaration of the undersigned is attached hereto.

The substitute specification is being presented at this time in lieu of an extensive amendment to specification as originally filed in an effort to present the Examiner with a document that is in compliance with United States Patent Office rules and thereby facilitate examination of the Request for Continued Examination application. Applicants' attorney believe that entry of the substitute specification will significantly reduce the clerical burden placed on the Patent Office by eliminating the need to enter the amendments by hand to the originally filed application, as well as reduce the expenses associated therewith.

In accordance with the provisions of MPEP 608.01(q), a copy of the originally filed application is being submitted in accordance to 35 U.S.C. 132, with markings showing all the changes relative to the immediate prior version of the specification of record. Also enclosed is an accompanying clean version without any markings.
